

# Admin Clinic Ambulance Approval & Verification API Specification

- **Base URL Path:** `/api/admin/approval`
- **Access Level:** `protect('admin') + checkRoleAccess(32)` (*Platform Admin / SubAdmin JWT Access*)
- **Common Headers Required:**

codeHttp

```
Authorization: Bearer <jwt_admin_token>
Content-Type: application/json
```

## 1. Get Clinic Ambulances List (Approval Queue)

Admin dashboard par sabhi clinics dwara submit ki gayi ambulances ki list dekhne, search karne aur status (*Pending, Approved, Rejected*) ke hisab se filter karne ke liye.

- **Full Endpoint URL:** `GET /api/admin/approval/ambulance`
- **HTTP Method:** `GET`
- **Access Level:** `protect('admin') + checkRoleAccess(32)`

### Query Parameters (Filters, Search & Pagination)

| Paramete<br>r Key | Data<br>Type | Status | Descripti<br>on /<br>Allowed<br>Values |
|-------------------|--------------|--------|----------------------------------------|
|                   |              |        |                                        |

|          |        |             |                                                                           |
|----------|--------|-------------|---------------------------------------------------------------------------|
| status   | String | ⚠️ Optional | Filter by verification status: "Pending"   "Approved"   "Rejected".       |
| clinicId | String | ⚠️ Optional | Filter ambulances belonging to a specific clinic Mongo <code>_id</code> . |
| search   | String | ⚠️ Optional | Search query matching Driver Name, Phone, Email, or Vehicle Number.       |
| city     | String | ⚠️ Optional | Filter by city name (E.g. "Mumbai").                                      |

|                      |                     |                                                                                                     |                                                        |
|----------------------|---------------------|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| <code>state</code>   | <code>String</code> |  <b>Optional</b>   | Filter by state name (E.g. <code>"Punjab"</code> ).    |
| <code>country</code> | <code>String</code> |  <b>Optional</b>   | Filter by country (E.g. <code>"India"</code> ).        |
| <code>page</code>    | <code>Number</code> |  <b>Optional</b>   | Page number for pagination (Default: <code>1</code> ). |
| <code>limit</code>   | <code>Number</code> |  <b>Optional</b> | Records per page (Default: <code>10</code> ).          |

]
}

```

## 2. Approve Clinic Ambulance

Admin dwara verification documents aur vehicle permits audit karne ke baad Ambulance ko **Approve** (live enable) karne ke liye.

- **Full Endpoint URL:** `PATCH /api/admin/approval/ambulance/approve/:id`
- **HTTP Method:** `PATCH`
- **URL Path Parameter:** `:id`

→→

Ambulance Mongo `id` (E.g. `6a9bbd01499ddb2bb7cbae01`)

- **Access Level:** `protect('admin') + checkRoleAccess(32)`

### Sample Response (200 OK)

codeJSON

```

{
  "success": true,
  "message": "Ambulance 'PB65AB1234' approved successfully."
}

```

```

    "data": {
      "_id": "6a9bbd01499ddb2bb7cbae01",
      "clinicId": "6a7d99429438532bd566a714",
      "name": "Rajesh Kumar (Driver)",
      "phone": "9876543219",
      "vehicleNumber": "PB65AB1234",
      "vehicleType": "Advance Life Support",
      "availableForEmergency": true,
      "profileStatus": "Approved",
      "rejectionReason": null,
      "isActive": true,
      "isOnline": true,
      "updatedAt": "2026-09-07T06:20:00.000Z"
    }
  }
}

```

### 3. Reject Clinic Ambulance (With Rejection Reason)

Agar vehicle documents invalid, expired ya blurred hain, toh Admin reason ke sath application ko **Reject** karega.

- **Full Endpoint URL:** `PATCH /api/admin/approval/ambulance/reject/:id`
- **HTTP Method:** `PATCH`
- **Content-Type:** `application/json`
- **URL Path Parameter:** `:id`

→→

Ambulance Mongo `:id`

- **Access Level:** `protect('admin') + checkRoleAccess(32)`

#### Request Body Parameters (JSON)

| Parameter Key       | Data Type           | Status                                             | Description / Example                          |
|---------------------|---------------------|----------------------------------------------------|------------------------------------------------|
| <code>reason</code> | <code>String</code> | <span style="color: red;">●</span> <b>Required</b> | Rejection reason string (E.g. <code>"Co</code> |

|  |  |  |                                                                                                                         |
|--|--|--|-------------------------------------------------------------------------------------------------------------------------|
|  |  |  | mmmercial<br>vehicle<br>insurance<br>policy is<br>expired.<br>Please re-<br>upload<br>valid<br>insurance<br>policy.")). |
|--|--|--|-------------------------------------------------------------------------------------------------------------------------|

---

### Sample Request Payload

codeJSON

```
{
  "reason": "Commercial vehicle insurance policy is expired. Please re-
upload valid insurance policy."
}
```

### Sample Response (200 OK)

codeJSON

```
{
  "success": true,
  "message": "Ambulance 'PB65AB1234' rejected.",
  "data": {
    "_id": "6a9bbd01499ddb2bb7cbae01",
    "clinicId": "6a7d99429438532bd566a714",
    "name": "Rajesh Kumar (Driver)",
    "phone": "9876543219",
    "vehicleNumber": "PB65AB1234",
    "availableForEmergency": false,
    "profileStatus": "Rejected",
    "rejectionReason": "Commercial vehicle insurance policy is expired.
Please re-upload valid insurance policy.",
    "isActive": true,
    "isOnline": false,
```

```
"updatedAt": "2026-09-07T06:22:00.000Z"
}
}
```

## ⚙️ Backend Execution Highlights

### 1. On **Approve**:

- `profileStatus`  
→→  
**'Approved'** set ho jata hai.
- `availableForEmergency`  
→→  
**true** ho jata hai (Ambulance live rides aur emergency dispatch ke liye ready ho jati hai).
- `rejectionReason` clear ho jata hai (null).
- Admin `ProfileUpdateRequest` collection me request status automatic **'Approved'** me sync ho jata hai.

### 2. On **Reject**:

- `profileStatus`  
→→  
**'Rejected'** set ho jata hai.
- `availableForEmergency`  
→→  
**false** aur `isOnline`  
→→  
**false** ho jata hai (Emergency booking block ho jati hai).
- Rejection reason database me save ho jata hai taaki Clinic dashboard par reject reason banner show kiya ja sake.
- Admin `ProfileUpdateRequest` queue me request **'Rejected'** mark ho jati hai.

## 💡 Frontend Developer Summary Flow

codeText

1. Admin Opens Ambulance Approval Queue:  
GET /api/admin/approval/ambulance?status=Pending&page=1 → Render

## Pending Fleet Table

### 2. Admin Reviews Vehicle Info & Support Staff:

Verify Driving License, RC, Insurance, Nurse/Doctor Availability & Pricing

### 3. Admin Submits Action:

└─> Approve: PATCH /api/admin/approval/ambulance/approve/:id → Ambulance Live for Emergency

└─> Reject: PATCH /api/admin/approval/ambulance/reject/:id { reason: "..."} → Ambulance Marked Rejected
